

ABOUT US

We provide technologically advanced rubber fabrication and bonding solutions for the global market.

Technical innovation is integral to our DNA. Our expert engineers work in close partnership with our customers to overcome not just today's challenges, but tomorrows too.

OUR WEBBING

Our high quality, premium webbing has been established in the United Kingdom for over 60 years, and is used by high end furniture manufacturers across the globe.

Constructed from a combination of both rubber and fabric, our webbing is a durable flat rubber spring. The rubber produces resilience, and the fabric controls the degree of elasticity and provides maximum reinforcement. The fabric reinforcement is present throughout the webbing, enabling it to be cut to any length to suit your exact requirements.

APPLICATIONS

Used by upholsterers for a wide array of classic chair and sofa projects, our webbing can be securely fastened onto the frame using a range of clips, staples, or tacks.

It is the ideal replacement for worn or damaged seat webbing in all kinds of quality furniture.

With a wide area of support our webbing permits the thickness of the chosen cushioning material to be reduced without sacrificing comfort offering a potential cost saving.

We are the supplier of choice and offer various options from the standard range of webbing products, to a bespoke service to meet your exact specification.

If you are interested in our webbing for the UK market, we have partnered with Handy Limited, who supply a vast range of components to the bedding and furniture industries.

Please visit them at www.handy ltd.co.uk for more information.
